The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3, 6, 11-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Hans et al., U.S. Patent # 6,112,062.

Figs 3 and 3a of Hans et al. discloses a circuit comprising: in Fig. 3a, signal through both d/dt boxes and resistor on the bottom branch can be read as means of generating a first signal; signal through first d/dt boxe and resistor on the middle branch can be read as means of generating a second signal; the combiner can be read as means for combining the first and second signals; in Fig. 3, Predistorter Control can be read as means for predistorting the input signal (see spec. col. 4, lines 40-45 and col. 5, lines 41-55).

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-4, 8, 11-14 are rejected under 35 U.S.C. 102(e) as being anticipated by Kim et al., U.S. Patent # 6,757,338 B1.

Fig. 2 of Kim et al. discloses a circuit comprising: signal from First Variable

Amplifier 202 can be read as means of generating a first signal; signal from Third

Variable Amplifier 206 can be read as means of generating a second signal; signal from Second Variable Amplifier 204 can be read as means of generating a third signal; signal from Fourth Variable Amplifier 208 can be read as means of generating a fourth signal; the First Adder 210 can be read as means for combining the first and second signals; the Second Adder 212 can be read as means for combining the third and fourth signals; First Predistorter Generator and Second Predistorter Generator can be read as means for predistorting the input signal.

Allowable Subject Matter

Claims 5, 7, 9, 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 15-22 are allowed.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 6,531,981 B1, # 6,600,369 B2 contain some limitations of the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia T Nguyen whose telephone number is (703) 308-1927. The examiner can normally be reached on 6:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on 703-309-4940. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
